

WHAT IS CLAIMED IS:

- 1 1. A system for calculating a charge for a data communication
2 session, comprising:
3 a wireless device capable of communicating with a network;
4 a data rating application residing in the wireless device;
5 wherein the data rating application is configured to detect one or more of a
6 plurality of events which take place during the course of conducting the data
7 communication session between the network and the wireless device;
8 wherein the data rating application is further configured to select one of a
9 plurality of rating options to calculate the charge for the data communication session
10 based on the one or more detected events.
